

Examples of methods that may benefit from additional log statements

@Override

```
public Resource getResource(String host, String path) {
    Path p = Path.path(path);
    if (basePath != null) {
        if (p.getFirst().equals(basePath)) {
            p = p.getStripFirst();
        } else {
            return null;
        }
    }
    InputStream content =
        this.getClass().getResourceAsStream(p.toString());
    if (content == null) {
        LOG_STMT;
        return null;
    } else {
        log.trace("return class path resource");
        return new ClassPathResource(host, p, content);
    }
}
```

TARGET: No need

PREDICTION: Need

@Override

```
public void run() {
    try {
        process.waitFor();
    } catch (InterruptedException e) {
        LOG_STMT;
        Thread.currentThread().interrupt();
    }
    try {
        hardStop();
    } catch (InterruptedException e) {
        LOG.debug("Interrupted while
            stopping [{}] after
            process ended",
            processId.getKey(), e);
        Thread.currentThread().interrupt();
    }
}
```
